Microsoft Research - Redmond

This June, I am visiting the Microsoft Research (MSR) Redmond lab. I am traveling there as a (gratis) Traveler/Lecture to discuss our work on Deep Learning without Poor Local Minima, Generalization in Deep Learning, to meet researchers and to collaborate on new projects.

MIT Infinite Mile Award Ceremony

On May 22nd, 2018, I attended the MIT Infinite Mile Award ceremony to watch my wife receive this award. My wife is an administrative assistant in the MIT Research Laboratory of Electronics. She supports three professors and their lab groups (which consist of PhD students, Postdoctoral scholars, visiting students and visiting faculty). This year she also assisted with

organizing a six-part lecture series called [The Gender/Race Imperative](#) with a visiting faculty member.

The Research Laboratory of Electronics is one of MIT's largest labs. It is home to seven different research fields ranging from Atomic Physics to Information Science to Photonic Materials Devices and Systems. I am in the Computer Science and Artificial Intelligence lab, which is next door to the Research Laboratory of Electronics.
